I understand there was an incident just the other day with Vonage. A subscriber who

tried to reach 911 was not able to get through and suffered seriously. Anyone who

provides telecommunications access to the general public must be required to provide  $% \left( 1\right) =\left( 1\right) \left( 1\right) +\left( 1\right) \left( 1\right) \left( 1\right) +\left( 1\right) \left( 1\right) \left$ 

e-911 access.
